

Scrum 04-24

- What have I worked on?

We use n-gram on NH and RI's data. We get some interesting results. For example, we found in reversed cases, the serious words like 'injury', 'sexual', 'weapon' will appear more frequent than the affirmed cases. Also we found in NH's data the cases with informants have more likely to related to 'drug'. We write the report and summary what we have done.

- What will I be working on next?

Today we talk with our clients, they said we should conclude the findings from n-gram. Next week, we will summarize the result and make slides.

- Have I talked to the client recently? When are we meeting with them next?

We talked to the client on 04-24
