

1. What work has the team done toward the project this week?
2. What work does the team plan to do next week?
3. Is the team having any issues?

1. We found matches from our dataset to the addresses of the state agencies. There are about 300 matches so far.
2. We plan to use ATTOM in order to find an association with the location and its real estate value. We also need to remove unusable land. Finally, we need to come up with a list of questions to ask the MAPC (Metropolitan Area Planning Council)
3. We still need to find a solid method of normalizing street addresses. We think this is the reason why we aren't getting as many matches as we expect.
